

Smart Trading

Trade instead of throwing

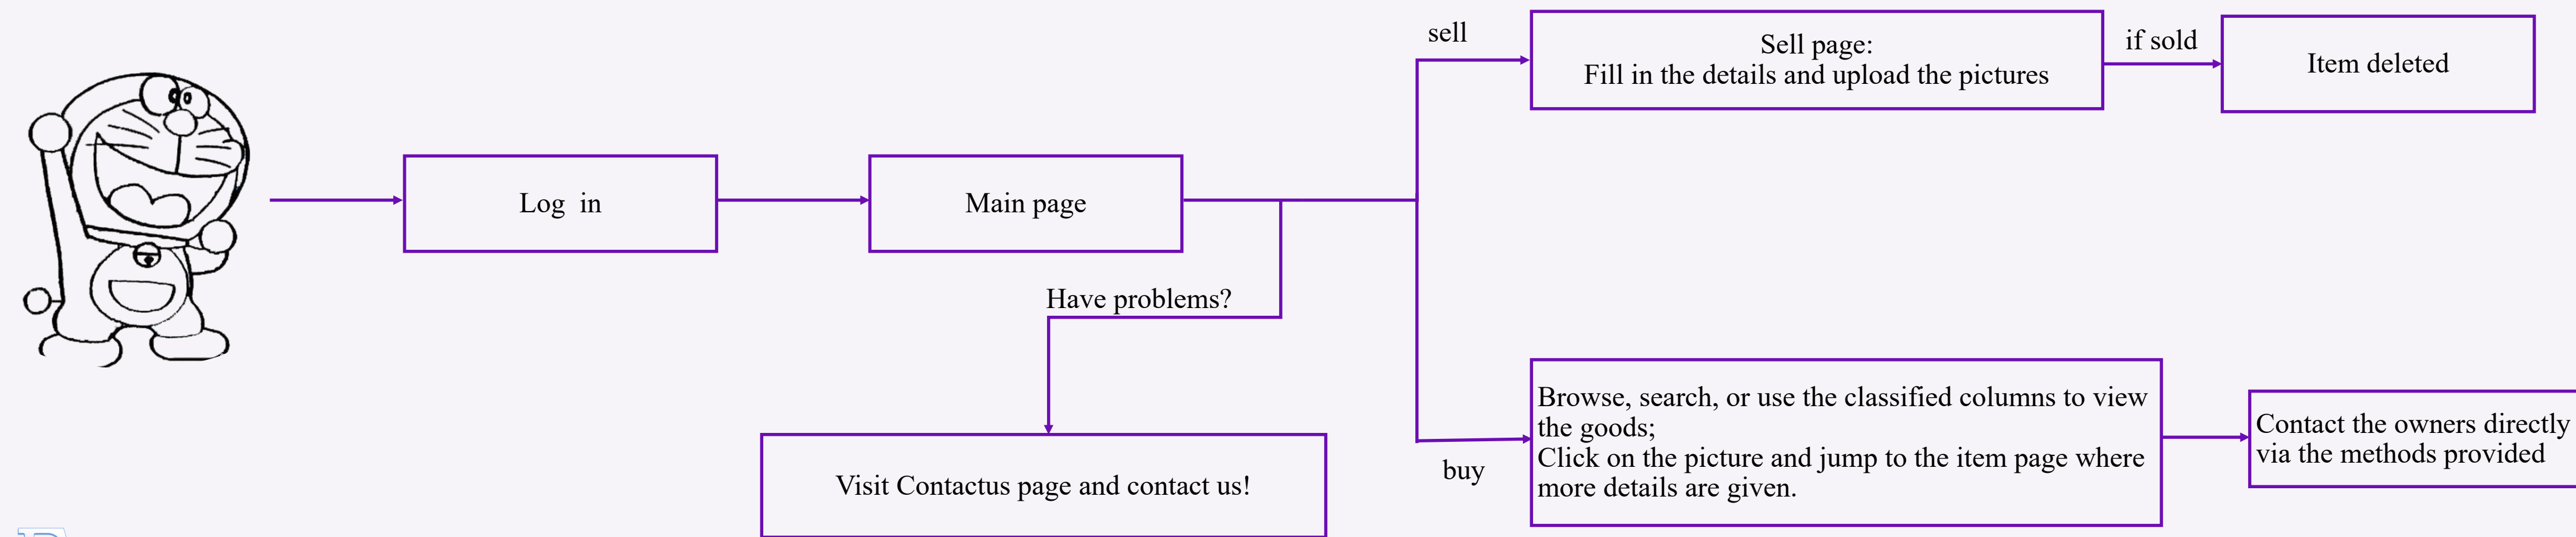

Have you ever wanted to buy a textbook for a module but ending up using an e-version of it due to the high price? Have you ever wanted to sell a portable air-con instead of throwing it away when not in use? We noticed that a lot of stuff like these is wasted, especially when a semester starts or ends. To solve the problem, we built a website that facilitates the trade of stuff not in use to reduce the waste. The goods could be dormitory appliances, textbooks & notebooks, clothes, cosmetics, etc.

The programming languages utilized to built the website include html, css, and javascript. To make it functional, we also added php files and linked the front-end to the database. In this way, we can manage the information about the trade.

The color code of our website is based on NUS orange and NUS blue. Orange boosts purchasing and the colors indicate the scope.

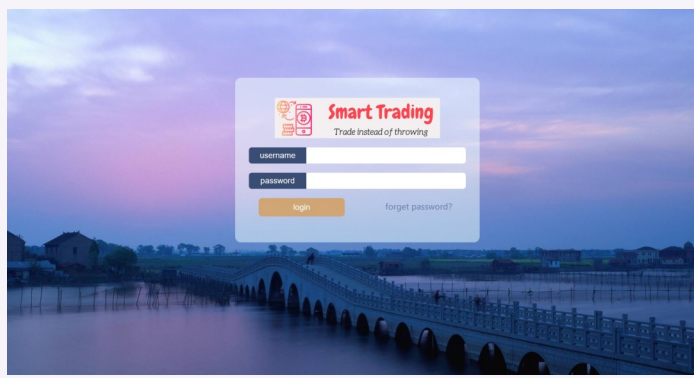

User Guide:

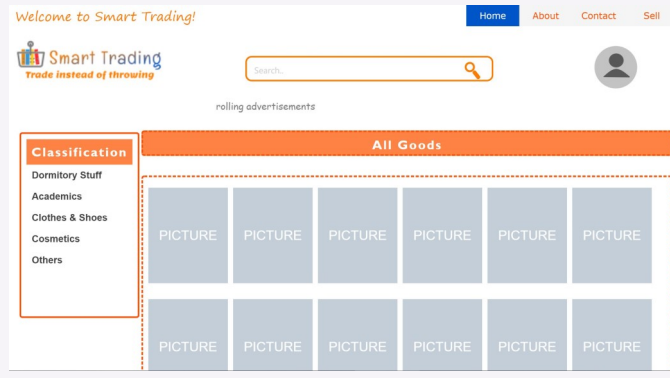

Features:

Here are pictures showing the features of our website and how they are arranged.

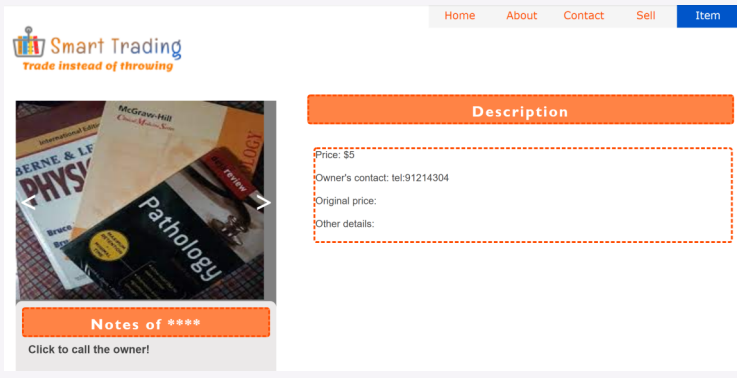

Login page:

Students can log in before they sell or buy stuff.

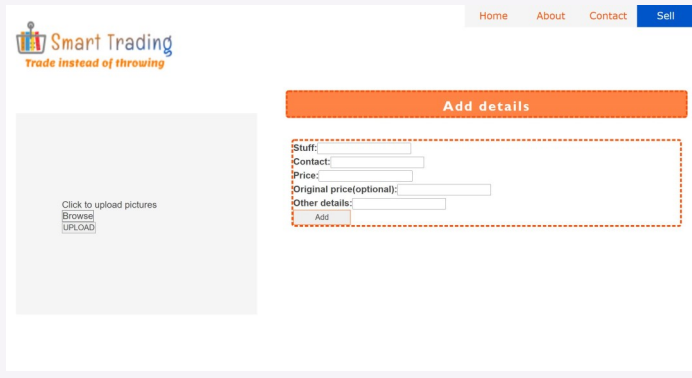

Home page:

Displays pictures of goods
Classified columns to make your search easier
Avatar that users can change accounts

Item page:

Shows the details of the goods.
There is a button where users can click on to make phone calls with the owner.

Sell page:

Users who logged in can sell stuff by filling up the details.

We also have other features like rolling advertisements of the latest goods or the stuff in demand, the top navigations that exist on each page (so that users can access any page all the time),

For you to explore. Hope you will enjoy trading with Smart Trading!

Trade Stuff not in use within NUS

Easy and fast
Highly targeted
Environmentally Friendly
Relatively Reliable

Try out the website at <https://e7c07757cd92.ngrok.io>
